APPLICATION TIPS		HOW TO USE YOUR SPREADER	TYPE MATERIAL	SETTING AT 3 MPH	SPREAD WIDTH IN FEET
Recommended speed: 3 MPH (100 feet in 23 seconds)		<ol style="list-style-type: none"> 1 Set flow gauge on #0 position and push control arm to the "OFF" position. 2 Move tractor and/or spreader onto flat surface. 3 Before filling spreader, refer to chart guidelines: 	FERTILIZER Powder Granular Pelleted Organic	3 - 5 3 - 5 3 - 5 6 - 8	3 - 4 8 - 10 10 - 12 6 - 8
(Reduce flow setting for slower speed, and increase for higher speed). Always move flow control arm to the "OFF" position while filling spreader and when STOPPING or TURNING, to prevent excess fertilizer being released. Spreaders operate best with solid materials. Distribution of powders may vary from this table in both spread width and coverage.			GRASS SEED Fine Coarse	3 - 4 4 - 5	6 - 7 8 - 9
			ROCK SALT ICE MELT	5 - 6 4 - 5	14-16 12-14

SAFETY INFORMATION

1. Read the information on the chemical package for instructions and cautions on handling and applying.
2. Wear eye and hand protection when handling and when applying lawn or garden chemicals.
3. Never allow children to operate the spreader.

WARNING: Over-inflated tires can explode, causing serious injury. To avoid injury, NEVER inflate tires beyond the maximum pressure printed on the sidewall of the tire. ALWAYS use a hand pump to safely inflate tires.

MAINTENANCE

1. Apply a light coating of grease to the gears as needed.
2. Before each use make a thorough visual check of the spreader for any bolts and nuts which may have loosened. Retighten any loose bolts and nuts.
5. Make sure the tires are adequately inflated. Do not inflate beyond the maximum pressure printed on the tire.
